

Defender® Solar Panel Bird Excluders

Product Code: BIRD0069

Suitable for: Pigeons & Seagulls

Protection:

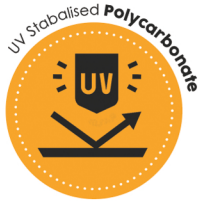

Solar panels with a gap underneath of: 80 -150 mm

Made from:

UV Stabilised Polycarbonate base, temperature resistance with no loss of mechanical strength from -20°C to 130°C.

Prongs Per Strip:

9 Polycarbonate prongs

Silicone Fixing Holes

Along the main body of the spike are 125 cross-shaped glue fixing holes. When the solar panel bird excluder is pressed onto the edge of the panel, the silicone oozes through the holes forming cross-shaped rivets that lock the excluder firmly in place.

Note: Before full installation, always stick down one strip for 24 hours to ensure the suitability of glue.

Installation:

Stick or screw onto the surface requiring protection. Always read the full installation guide before installing this product. The Defender® Solar Panel Bird Excluders can be shortened to smaller lengths - with 8 snapping points along the main body.

Pre-Measured Cutting Lines:

The height of the prongs may need adjusting to accommodate undulating tiles or differing heights of roof tiles that step down. The prongs have grooves on the bottom half of the prongs which can be cut off using a cutter tool. The ends of the prongs should touch or hover just above the tiles of a distance no more that 25 mm.

Note: Before full installation, always stick down one strip for 24 hours to ensure the suitability of glue.

Warranty:

These spikes come with a 15 Year Warranty when installed in the UK. Terms and Conditions apply - see website.

Disclaimer: It is always the responsibility of the user to install as per the manufacturer's installation guide - see website.
